

Man-Ki Moon

M.S. Candidate in Materials Science and Engineering, Expected February 2027
Gachon University, Seongnam, Republic of Korea
munoemanki@gmail.com | +82-10-4550-6513 | mankimoon.github.io

EDUCATION

Mar. 2025 - Present	Gachon University <i>M.S. in Materials Science and Engineering, expected Feb. 2027</i> GPA: 4.31 / 4.50	Seongnam-si, Korea
Mar. 2020 - Feb. 2025	Gachon University <i>B.S. in Materials Science and Engineering</i> B.S. in Industrial and Business Engineering GPA: 3.83 / 4.50	Seongnam-si, Korea

RESEARCH INTERESTS

- Thin-film growth, surface chemistry, and defect control in electronic materials
- Semiconductor interfaces, contacts, dielectric integration, and low-dimensional material systems
- Thin-film process-interface relationships and data-assisted correlation of growth, structure, and device behavior

SKILLS AND TECHNIQUES

Growth and fabrication: thermal CVD operation; e-beam evaporation; SWNT, graphene oxide (GO), and MoS₂ processing; electrospinning; thin-film device fabrication

Interface and transport analysis: spatial and in situ Raman; FTIR; SEM-EDS; electrical, thermal, and electromechanical characterization

Computational support: Python spectral and image analysis; ORCA finite-cluster calculations; OpenFOAM reactive-transport modeling

RESEARCH EXPERIENCE

Nano Synergy Laboratory, Gachon University | Graduate Researcher, Mar. 2025 - Present;
Undergraduate Researcher, Feb. 2022 - Feb. 2025

Interfacial Spectroscopy and Transport in MoS₂-Containing Nanofiber Composites

- Fabricated electrospun PVA/PEDOT:PSS-GO/MoS₂ mats and five-unit serial devices; combined spatial Raman mapping, in situ MoS₂ vibrational tracking, FTIR, transport measurements, and ORCA interaction-energy calculations to examine interfacial reorganization.

Metal/SWNT/PI Flexible Thin-Film Conductors

- Investigated how SWNT-modified polymer interfaces influence metal-film continuity, crack evolution, and electrical reliability using controlled surface processing, e-beam evaporation, and resistance-strain measurements.
- **Custom Electromechanical Testing Platform:** Designed and 3D-printed a tensile-testing system to enable synchronized mechanical loading and electrical-resistance measurements unavailable with the existing laboratory setup.

OpenFOAM Reactive-Transport Modeling for CNT CVD

- Implemented a baseline OpenFOAM workflow coupling C₂H₂ chamber transport with simplified surface-consumption, catalyst-state, and sub-grid CNT-growth responses under a controlled nominal recipe.

MANUSCRIPT IN PROGRESS

1. **Moon, M.-K.**, Jung, S.-C., Jang, W.-J., Beom, B.-J., and Han, J.-H. "Spatial Raman Mapping, In Situ MoS₂ Vibrational Tracking, and Interfacial Contact Energetics in Electrospun PVA/PEDOT:PSS-GO/MoS₂ Thermoelectric Mats." Manuscript in progress.

PEER-REVIEWED PUBLICATIONS

CONFERENCE PRESENTATIONS

1. **Moon, M.-K.**, et al. "Fabrication of GO/MoS₂ Nanofibers by Electrospinning for Thermoelectric Applications." Nano Korea, 2025. Poster.

AWARDS AND HONORS

- Grand Prize, Gachon University Career Exploration Performance Report Meeting, 2023.
- Career Catch Project Scholarships, Gachon University, four awards, 2022-2024.
